°LSD (0.30)			2.5	1			
°LSD (0.05)			4.5	1			
Coefficient of Variation (CV)			13.1				

<sup>a</sup>Yield adjusted to 12% moisture and varieties ranked by yield (highest to lowest). Variety yields in bold are in the top LSD group (0.30).

<sup>b</sup>Wheat Stem Sawfly Cutting score: 1 equals no damage/cutting and 9 is severe damage/cutting, averaged across three replicates.

<sup>c</sup>Farmers selecting a variety based on yield should use the LSD (0.30) to protect from false negative decisions. Companies or researchers may be interested in the LSD (0.05) to avoid false positive conclusions.

**Site Information**

Collaborator: Cooksey Family Farms

Harvest date: July 11, 2022

Planting date: September 20, 2021

Soil Type: Weld loam

GPS Coordinates: 40.08204, -104.30125

Trial Comments: Planted 2" deep with moisture at 2.5 to 3". Ground was hard so shovels were used on planter to help get seeds into moisture. Good fall emergence and growth with a few bare spots in the trial. In mid-April cosmetic freeze damage was noted and brown wheat mites were present at very low levels. No moisture in the top 5" of the soil in April and through most of May. Radar estimates showed the trial received 7.9" of precipitation and 1524 growing degree-days (GDD) (base 32°F) from Jan. 1st through July 11th, which was 2.5" below and 47 GDD above the 10-year average, respectively.
